
$M = 4 \times 10^{-31}\, M_P$, $\phi_* = 5\, M_P$: shifts relative to PRyMordial + ΛCDM
ΔY_p [%]
Δ(D/H) [%]
$\Delta N_{\rm eff}$ today
β
range over all 13 α, 0.001–0.15, where all were sampled
each history, coloured by α (dark: 0.001, yellow: 0.15)
$\alpha = 0.08$
$\pm 2\sigma$ of the measurement, about PRyMordial + ΛCDM
2σ of Planck 2018's $N_{\rm eff}$ (0.34)
not at the wall before BBN ($T_{\rm deliver} < 10$ MeV; $\beta < 1.066$)
surfs the electroweak kick ($\beta > 3.000$–3.005)
analytic QCD surfing threshold $\beta = 1.1074$
no BBN result at any α (BBN temperature below PRyMordial's floor, or no history)
band above the axis
